They are also used to stimulate the immune system, and to increase, in culture, the production of associated cTL, for reinjection, and/or to induce secretion of cytotoxic factors from CTL. Dendritic cells loaded with iCE are used to induce such CTL in cultures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 1680 BP; 345 A; 475 C; 488 G; 372 T; 0 U; 0 Other;

```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The invention provides 53010 nucleic acids, antisense CC molecules, expression vectors, host cells, transgenic animals, 53010 cc proteins, fusion proteins, antigenic peptides, anti-53010 antibodies and CC methods for detecting the presence of 53010 polypeptides or nucleic acids, of identifying a compound that binds to the 53010 polypeptide, and compound that binds to the 53010 polypeptide, and compound that binds to the 53010 polypeptide, and controlling disorders involving aberrant or deficient hydrolysis of controlling disorders involving aberrant or deficient hydrolysis of carboxylic esters. As 53010 mRNA is highly expressed in the central and peripheral nervous system, and its expression is regulated in some rodent therapeutic agents for controlling neurological disorders, such as pain-related disorders. A claimed method of treating or preventing a disorder of a 53010-expressing cell involves administering a compound that condulates 53010 activity or expression

                                                                                                                                                                                                                              The present invention describes the use of polypeptides related to CC urological disorders for identifying a compound capable of treating a CC urological disorder, identifying a subject having a urological disorder, cor treating a subject having a urological disorder. Also described: (1) a CC method for identifying a compound capable of treating a urological CC disorder; (2) a method for identifying a subject having a urological CC disorder; and (3) a method for treating a subject having a urological CC disorder. The compound has uropathic and cytostatic activities. The CC compound capable of treating a urological disorder are useful for identifying a CC compound capable of treating a urological disorder, identifying a subject having a urological disorder, or treating a subject having a urological compound capable of treating a urological disorder. Disorders include urinary incontinence and benign prostatic CC thyperplasia. The present sequence represents a human urological disorder celated protein, which is used in the exemplification of the present

The invention relates to an isolated polypeptide with signal sequences CC which allow it to be secreted extracellularly or membrane associated. The CC extentatic, vulnerary, antiarteriosclerotic, antiparkinsonian, notropic, cryostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, notropic, cardiant, antiulcer, virucide, antityroid, cerebroprotective, amorectic, CC endetabolic. Polypeptides and polynucleotides of the invention are CC useful in the treatment, or as a vaccine in the prevention of, cancer, CC wound healing disorders, infection, atherosclerosis, Parkinson's disease and Alzheimer's disease, autoimmune disorder, haematopoietic disorder, inflammation, neoplastic diseases, nervous system related disorders and CC hyperproliferation, systemic autoimmune disease, hyper-immunity, CC developmental abnormality, gastrointestinal ulceration, neuropathy, cancers e.g. hypothyroidism, brain damages, colitis, cone photocransity of the provention deficiency, neurological diseases, streke, angiogenesis, covulation deficiency, neurological diseases, streke, angiogenesis, CC ovulation of sorders, and alleviation of precocious puberty. The CC growth abnormalities, and alleviation of precocious puberty. The ccc growth abnormalities, and alleviation of precocious puberty. The ccc growth abnormality and the spinal cord, thyroid human of the invention

Novel human drug metabolizing polypeptide, useful in diagnosis, prevention or treatment of autoimmune/inflammatory, cell proliferative, prevention or treatment of autoimmune/inflammatory, cell proliferative, prevention or treatment of autoimmune/inflammatory, cell proliferative, prevention or treatment of autoimmune/inflammatory cell proliferative, and isocated human drug metabolic and gastrointestinal for disorders.

CC The invention relates to an isocated human drug metabolising enzyme (DME) and its nucleotide. DME is useful for disposing, treating or preventing cell disorders associated with aberrant expression of DME, where the disorders are selected from autoimmune/inflammatory disorder such as arteriosclerosis, psociasis, cell proliferative disorder such as arteriosclerosis, psociasis, uveitis; a cell proliferative disorder such as arteriosclerosis.

CC cinthosis, hepatitis, and cancer; a neurological disorder such as a neurological disorder such as endocrine disorder; an eurological disorder such as endocrine disorder such as renal tubular acidosis, epilepsy, can eye disorder such as conjunctivitis, glaucoma, cataract; metabolic cell disorder such as cystic fibrosis, diabetes and goitre; a gastrointestinal cell services such as anorexia, peptic ulcer; and liver disorders. DME is useful in a number of drug screening techniques and to analyse the conjunctivitis, glaucoma, cataract; metabolic cell such as anorexia, peptic ulcer; and liver disorders. DME is useful in a number of drug screening techniques and to analyse the construction due to translocation, inversion, etc. among normal, carrier or cell such as a such as anythidisation probes for mapping naturally cocurring genomic sequences. The present sequence is human DME-10 occurring genomic sequences. The present sequence is human DME-10

                                               The invention relates to novel diagnostic and therapeutic polynucleotides CC selected from one of the 2722 sequences defined in the specification. A CC polynucleotide of the invention may have a use in gene therapy. The human CC diagnostic and therapeutic polynucleotides (dithp) or polypeptides may be used to diagnose a particular condition, disease or disorder associated CC with human molecules, e.g. cell proliferative disorders, condition for the proliferative disorders, conditions caused by virus, bacteria, fungion parasite. The dithp CC disorder, neurological disorders, gastrointestinal disorders, or CC infections caused by virus, bacteria, fungion parasite. The dithp CC molecules may also be used in genetic mapping, in identifying individuals CC from minute biological samples, in detecting single nucleotide CC polymorphisms, as molecular weight maxiers, and for somatic or germline CC gene therapy. The present sequence represents a dithp protein of the convention. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly forms.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              schmidt JP, Wright RJ, Bruns CM, Marjanovic MM, Shen F; Harthshorne TA, Suchorolski MT, Altus CM, Pitts SJ, Elder LV; Mooney EM, Delegeane AM, Panesar IS, Banville SC, Reddy TP; Stevens KA, Blanchard JL, Panzer SR, Wang X, Au AP, Gerstin Peralta CH, Anderson SB, Rioux P, Shen EJ, Wu MC, Stuve LL; Lagace RE, Spiro PA, Stewart EA, Wingrove J, Vitt UA, Kirton Xu Y, Kwong M, Policky JL, Hurwitz BL, Ma Y, Jackson JL, Giventury S, Shi X, Suarez CJ;
                                                                                                                                                                                                                                                                                                                                                                                                                  New diagnostic and therapeutic polynucleotides and polypeptides, useful in diagnosing a condition, disease or disorder associated with human molecules, e.g. autoimmune or inflammatory disorders, in gene therapy or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        18-NOV-2004 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                  ä

                                                                                                                                                                              밁
                                                                                                                                                                                                               ঠ
                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated polypeptide with signal sequences which allow it to be secreted extracellularly or membrane associated. The convention of polypeptides of the invention may be described as, cytostatic, vulnerary, antiarteriosclerotic, antiparkinsonian, mootropic, cardiant, antiulcer, virucide, antityroid, cerebroprotective, anorectic, consequences of the invention are convention. Polypeptides and polynuclectides of the invention are convented in the treatment, or as a vaccine in the prevention of, cancer, wound healing disorders, infection, atherosclerosis, Parkinson's disease, antoimmune disorder, haematopoietic disorder, and Alzheimer's disease, autoimmune disorder, haematopoietic disorder, cardiovascular disorders, pancreatitis, respiratory disorder, hypeproliferation, systemic autoimmune disease, hyper-immunity, converted disorders and hyperroliferation, systemic autoimmune disease, hyper-immunity, converted disorders e.g. hypothyroidism, brain damages, colitis, cone photocolus converted disorders, diseases in the spinal cord, thyroid gland, heart, covulation disorders, diseases in the spinal cord, thyroid gland, heart, convulation disorders, and alleviation of precocious puberty. The growth abnormalities, and alleviation of precocious puberty. The growth abnormalities, and alleviation of precocious puberty. The convertion of the invention
                                                                                                                                                                                                                                               Query Match 84.7%;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           485
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     484
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   424
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    425
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  365
```

The present invention relates to novel human secretory or membrane proteins (ADA54072-ADA55710) and their coding sequences (ADA52433-ADA54071). The coding sequences are useful in the gene therapy of diseases caused by abnormalities of the proteins, e.g. cancer, inflammatory diseases, osteoporosis or neurological disease.

Claim 14; SEQ ID NO 2375; 205pp; English.

New isolated NOVX polypeptide useful for treating atherosclerosis, metabolic disorders, diabetes, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease and cancer.

Claim Ļ Page 303; 666pp; English.

The invention relates to human polypeptides, termed NOVX, and the polypucleotides encoding them. The polypeptides and polynucleotides are useful for diagnosing disease, and screening for potential therapeutic agents. The sequences are useful for treating metabolic disorders, cardiomyopathy, diabetes, hypertension, congenital heart defects, aortic stenosis, atrial septal defect (ASD), atrioventricular canal defect, ductus arteriosus, pulmonary stenosis, subaortic stenosis, ventricular septal defect (VSD), valve diseases, tuberous sclerosis, scleroderma, atherosclerosis, obesity, infectious disease, anorexia, neurodegenerative disorders, Alzheimer's disease, Parkinson's disease, immune disorders, haematopoietic disorders, haemophilia, hypercoagulation, Crohn's disease haematopoietic disorders, haemophilia, hypercoagulation, Crohn's disease and cancer. Sequences ABU54542-ABU54647 represent human NOVX polypeptides of the invention
